STRATEGIC MARKET INTELLIGENCE · FY2022 – FY2024

India Electric Vehicle Market Intelligence Report

2-Wheeler & 4-Wheeler Segments · State Penetration · Revenue Trajectory · 2030 Outlook

2M+	93.91%	₹20,963Cr	4.81%
EVs Sold	2-Yr CAGR	FY2024 Revenue	Penetration Rate

Executive Summary

3 headline findings

01

Market is Maturing, Not Stalling

2M+ EVs sold in 3 years. Growth decelerated from 186% (FY22→23) to 31.5% (FY23→24) — a natural maturation signal, not decline. 95 in every 100 vehicles sold is still non-electric, meaning the opportunity ahead dwarfs what has already been captured.

02

4-Wheelers: High Value, Low Competition

4W segment posted 116% CAGR vs 92% for 2W — and generates 62% of total EV revenue despite only 7.4% of units. The 2W segment is consolidating fast around OLA Electric. The 4W segment has no dominant player, making it the highest-quality entry point.

03

Karnataka & Maharashtra Lead — Organically

Karnataka outperforms Delhi on 2W penetration (11.57% vs 9.40%) despite Delhi's ₹30,000 direct subsidy. Organic, demand-led adoption is more durable than incentive-driven adoption. Maharashtra and Karnataka together represent 19M+ projected EVs by 2030.

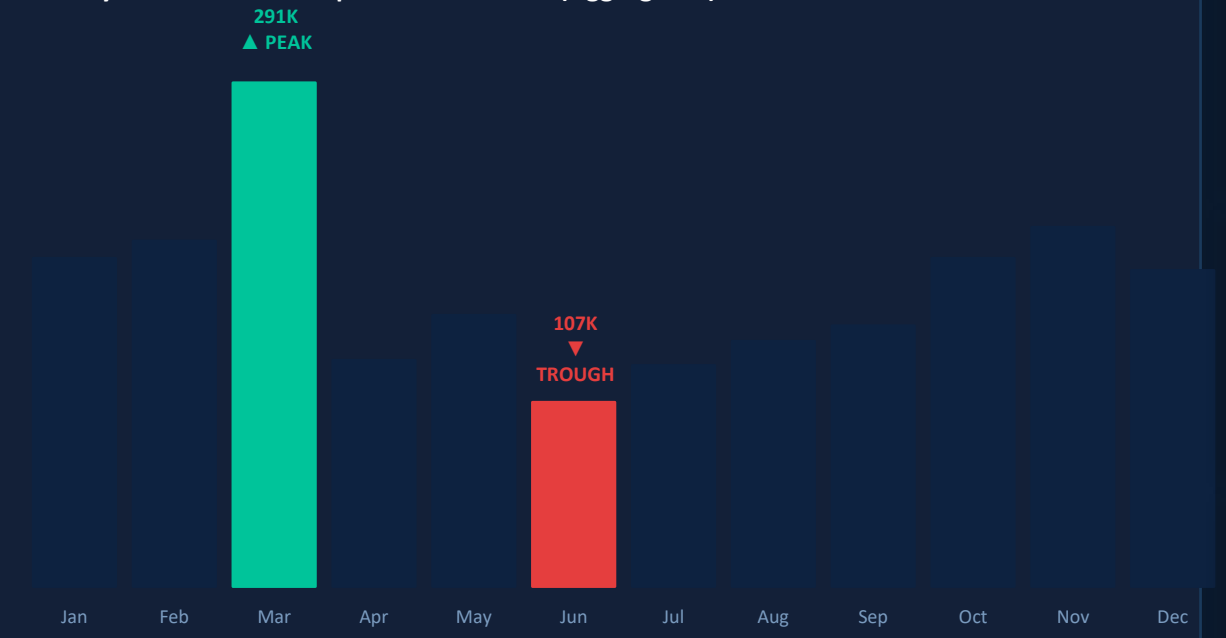
Seasonal Demand Patterns — When India Buys EVs

Monthly & Quarterly Analysis

Monthly EV Sales Pattern | FY2022–FY2024 (Aggregated)



Optimal Launch Timing: Build inventory Jul–Aug (low noise) → Dealer activation Sep → Festive push Oct → Peak campaign Feb–Mar

March Peak

291K units — fiscal year-end effect. Fleet purchases, subsidy deadlines, and dealer targets converge. 40% above second-highest month.

June Trough

107K units — monsoon onset. 63% below March. Lowest consumer sentiment for new vehicle purchases.

Festive Season

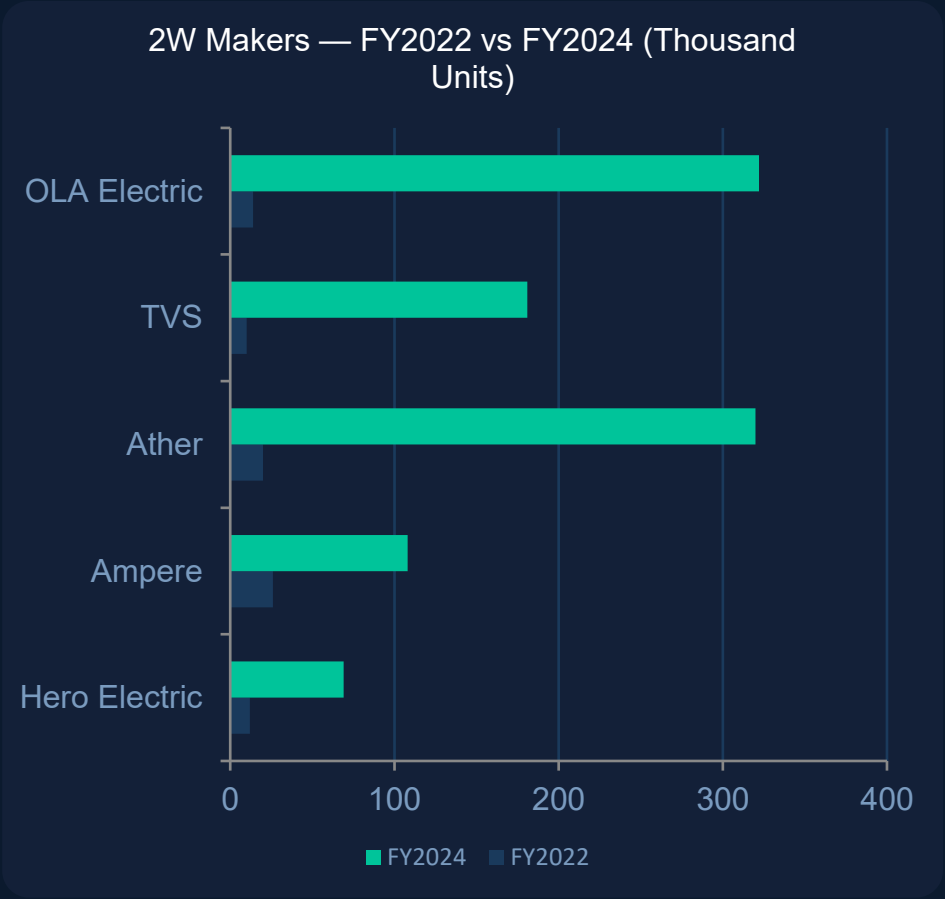
Oct–Dec secondary peak driven by Navratri, Dussehra & Diwali. Dealers push inventory; consumer willingness peaks.

2-Wheeler Segment — Market Structure & Competitive Dynamics

Market Leaders & Laggards — FY2023 vs FY2024

Position	Maker	FY2023	FY2024
#1 Top	OLA Electric	152,000	322,000
#2 Top	TVS	45,000	181,000
#3 Top	Ather	64,000	108,000
#1 Bottom	Battré Electric	—	4,841
#2 Bottom	Jitendra EV	—	8,000
#3 Bottom	Revolt	—	11,000

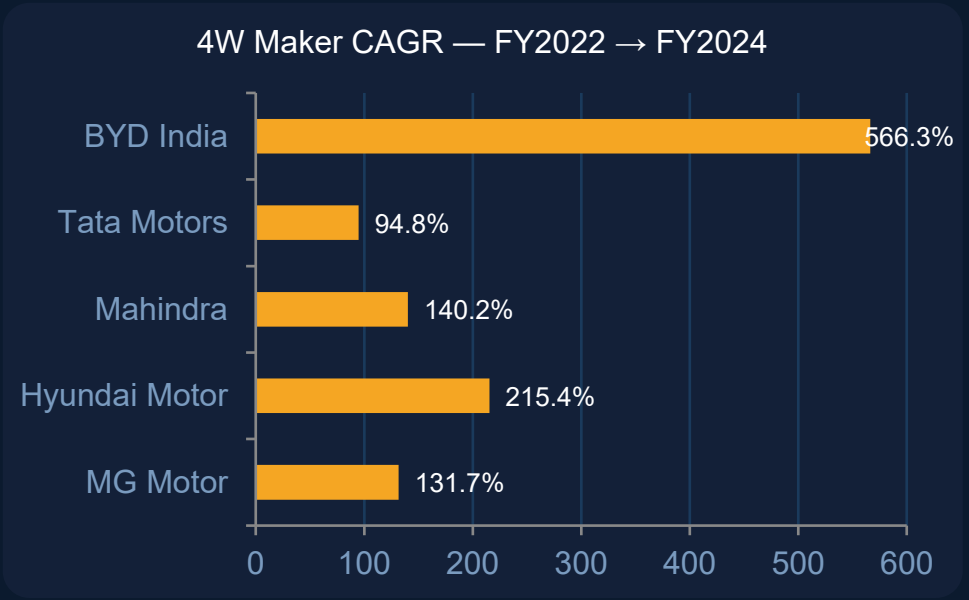
⚠ Market reshuffled entirely between FY23 & FY24. Top 3 in FY2023 ≠ Top 3 in FY2024 — OLA accelerated away while Hero Electric and Okinawa collapsed.

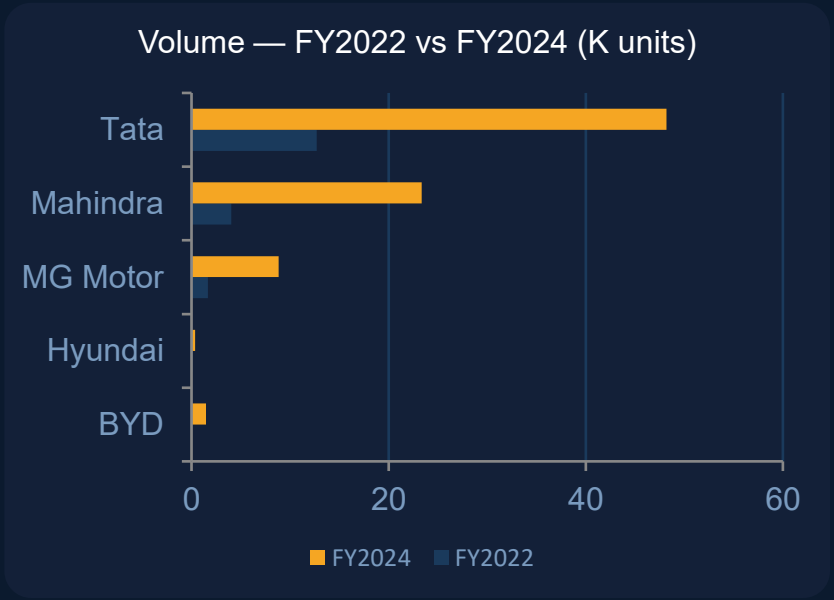


4-Wheeler Segment — CAGR, Volume & Competitive Landscape

153K	116.28%	48,181	566%
Total 4W Units (3 Yrs)	4W CAGR FY22→FY24	Tata FY2024 Units	BYD India CAGR*

** BYD started from only 33 units in FY2022 — high CAGR reflects small base, not volume parity*



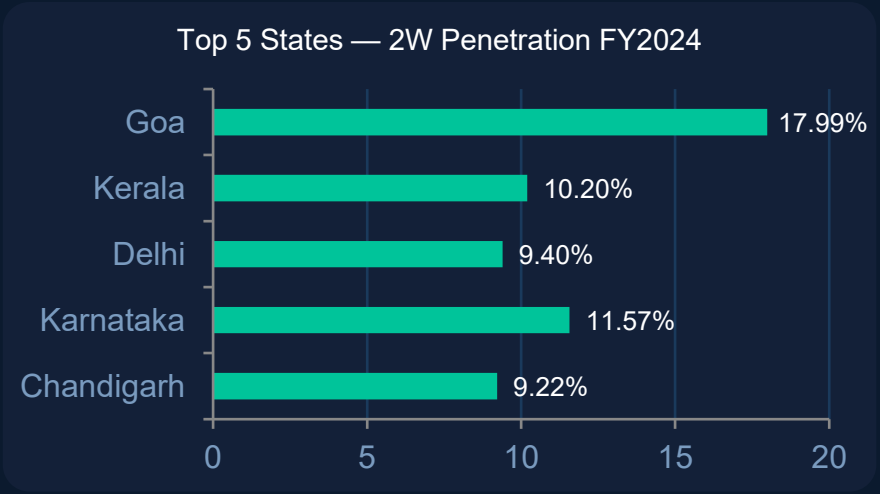


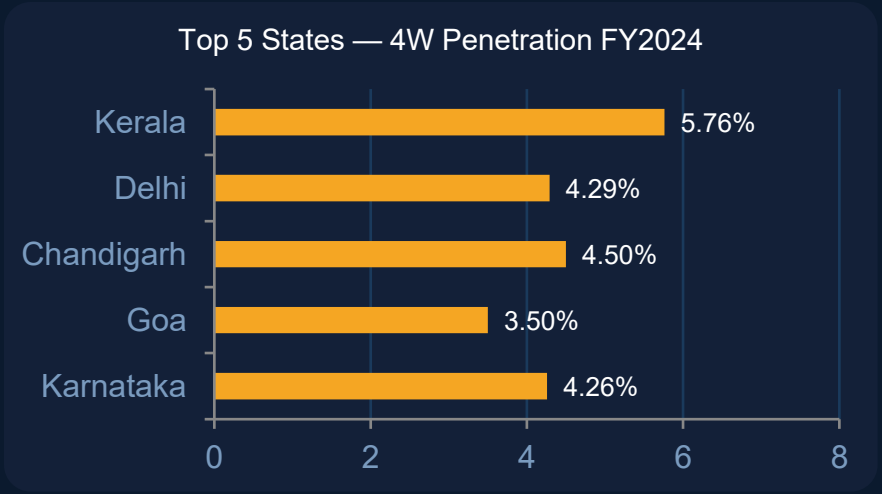
🔍 Watch Signal: BYD India grew from 33 → 1,466 units. Negligible today — but at this trajectory, they become a serious competitor in 3–5 years.

State Analysis — Where India Is Buying EVs

Penetration & Priority Markets

Top 2W State	Top 4W State	Highest 2W Vol	2nd Highest Vol
Goa	**Kerala**	**Karnataka**	**Delhi**
17.99%	5.76%	11.57%	9.40%





States with Declining Penetration FY22→FY24

Andaman & Nicobar (4W: -1.11pp) · Ladakh (2W: -0.41pp) | Both are infrastructure-constrained UTs — not demand signals.

Priority Market Signal

Goa, Kerala, Karnataka & Delhi lead in BOTH 2W and 4W simultaneously — only 4 states achieve this dual-category leadership.

Policy vs Organic Demand — A Critical Distinction

Delhi vs Karnataka · FY2024

Karnataka

Organic demand — Bengaluru tech economy

2W: 11.57% | 4W: 4.26%

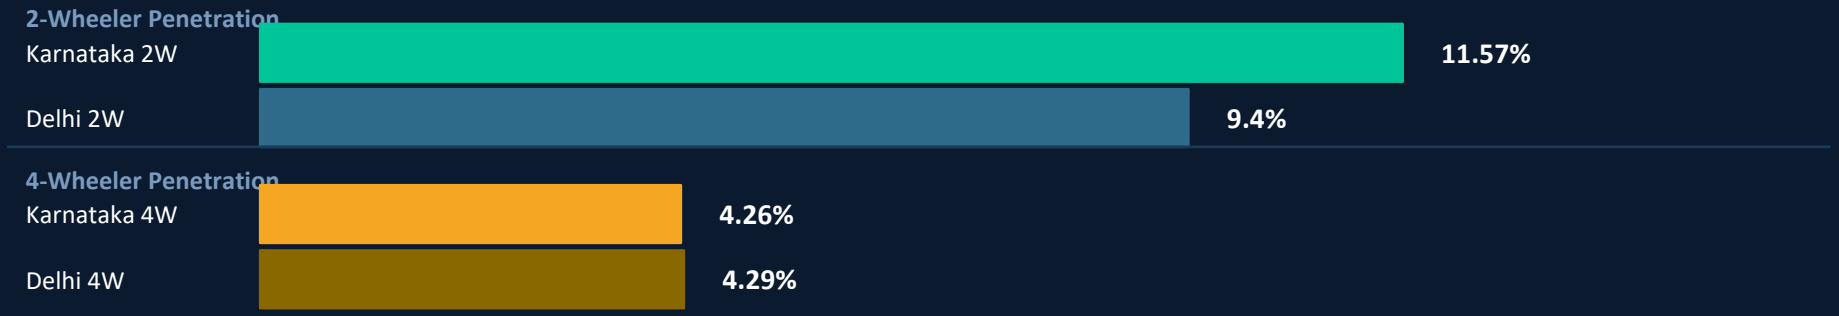
No direct consumer purchase subsidy

Delhi

Policy-led — Delhi EV Policy 2020

2W: 9.40% | 4W: 4.29%

₹30,000 direct subsidy + road tax waiver



Key Finding

Despite Delhi's aggressive ₹30,000 direct incentive — the most comprehensive state EV policy in India — Karnataka leads on 2W penetration. This proves that genuine demand, not subsidy, drives durable EV adoption. Karnataka is the stronger strategic market.

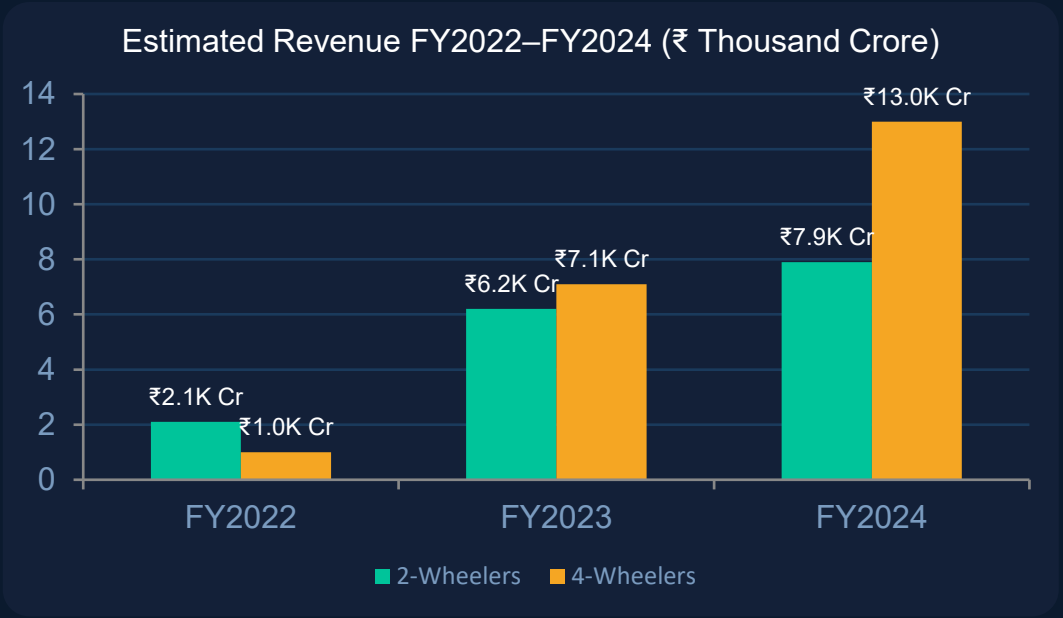
Revenue Trajectory — 4W Is Winning the Value War

₹20,963 Cr
Total Revenue FY2024

324.92%
Revenue Growth FY22→FY24

269.28%
2W Revenue Growth

367.79%
4W Revenue Growth



Phase Shift

4W overtook 2W revenue in FY2024 despite 12.5x fewer units sold. Unit economics dominate — a single 4W EV = 17.6x the revenue of one 2W.

Delayed Wave

2W led revenue growth FY22→23 (188%). But 4W surged FY23→24 (83% vs 28%). The 4W market had a delayed but far stronger second acceleration.

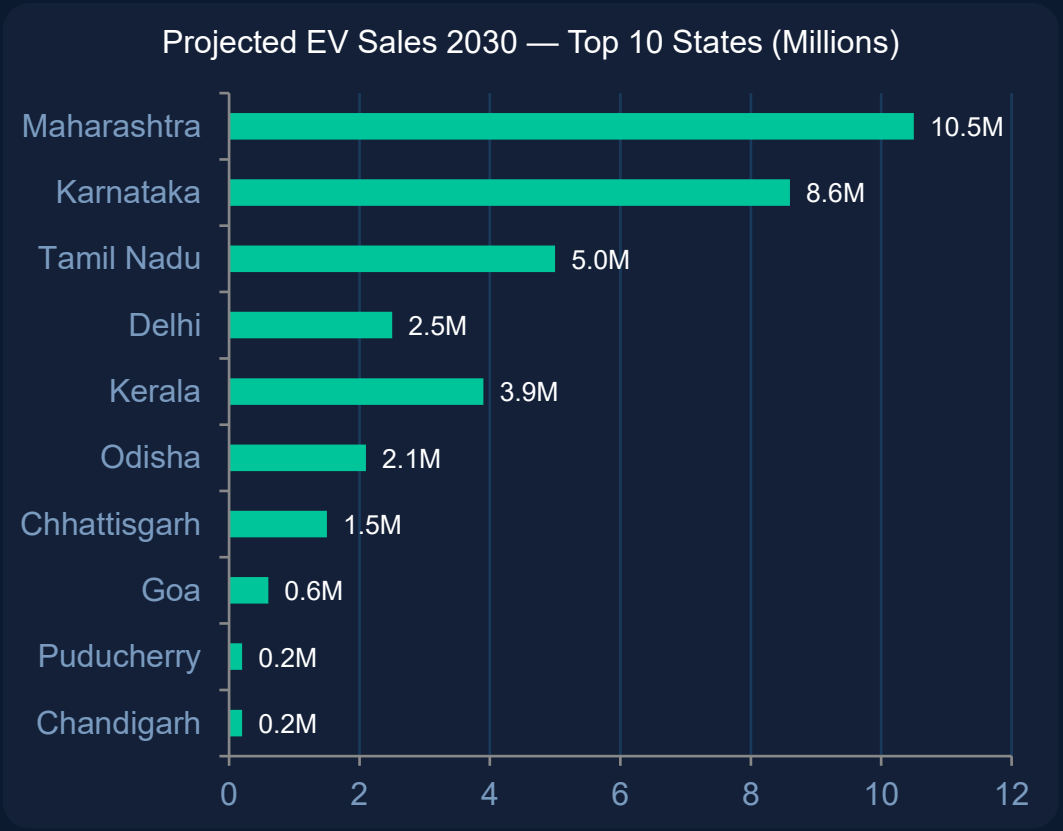
Revenue Mix

4W now generates 62% of total EV revenue from only 7.4% of units. Selling fewer, higher-value vehicles creates a superior margin profile.

** Revenue estimated at assumed average prices: 2W = ₹85,000 | 4W = ₹15,00,000*

2030 Outlook — Projected EV Sales by State

Based on FY2022–FY2024 CAGR



Tier 1 — Primary Markets

Maharashtra (10.5M) · Karnataka (8.6M)

Combine high CAGR with large absolute market. First-mover advantage is most valuable here.

Tier 2 — High-Growth Watch

Tamil Nadu (5.0M) · Kerala (3.9M)

Strong EV culture + government support. Near-term follow-on markets after Tier 1 entry.

Tier 3 — Monitor Only

Delhi (2.5M) · Odisha (2.1M)

Policy-led — projections sensitive to subsidy changes. Enter only after organic demand firms up.

⚠ *Assumes constant CAGR from FY2022–2024. Actual numbers will be lower as markets mature — use as directional sizing, not hard forecast.*

Strategic Recommendations

3 Pillars of Market Entry

01

⚡ Prioritise the 4-Wheeler Segment

- 116% CAGR vs 92% for 2W — faster growth
- 62% of total revenue from only 7.4% of units
- No dominant player — Tata leads but at 48K units, far from monopoly
- 2W market consolidating around OLA; no entry point for newcomers
- Every 4W EV generates 17.6× the revenue of a 2W EV

02

📍 Enter Karnataka, Then Maharashtra

- Karnataka: organic demand, tech-economy buyer, 11.57% 2W penetration without subsidies
- Maharashtra: largest absolute market — 10.5M EVs projected by 2030
- Both combine high CAGR with large base — best risk-adjusted entry
- Tamil Nadu & Kerala as Phase 2 expansion after establishing foothold
- Avoid leading with Delhi — policy-driven demand is subsidy-dependent

03

📅 Time Entry Around Market Rhythms

- Launch in Oct for festive season — maximum consumer intent
- Peak March surge: activate fleet & corporate channels Feb–Mar
- Avoid May–June launch (monsoon trough — 63% below peak)
- Build dealer/service network Jul–Aug (low-noise period)
- Watch BYD India — 1,466 units now; potential credible competitor by 2027

The 4W segment offers the highest risk-adjusted return — first movers will define the next decade of India's EV market.
